No. is the number of results producted by manyor. However, score greater than or equal to the score of the result become printed, and is derived by analysis of the total score distinct in it.
                                                                                                                                                                                                                                    18:14:41 , Shandon time 41 decoras

The present invention relates to intkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles

conjugation of compounds (e.g. peptides) to carrier vehicles

the accordiscules, polymers, dendrimers, proteins) to produce

biological and imminological constructs. The invention provides a

method for intking an epitope (e.g. a peptide) to a carrier (e.g. a

protein) for use in a pharmacetical composition or a vaccine. The

invention describes peptides derived from or immitoglobulin E

(igE: which are used to produce conjugated compounds. The compounds or

compositions of the invention are useful in the manufacture of a

medicardout for the irrathment of igE mediated diseases. The invention

allows for continited conjugation of a peptide epitope (antigen) to a

protein so as to form an imminogenic conjugate which may be able to

raise a protective an immody response in an animal or human patient.

The present invention relates to conjugates suitable for use in vaccine, where the conjugate comprises a disalphide bridge cyclised peptide and immunogenic carrier. The vaccines can be used in the treatment of allergies. The present sequence is a cyclic peptide immunogen derived from human immunoglobulin E (19E) suitable for use in the invention.
                                                                                                                                                                            Immunogon; human; 198; ummunoglobulin By allengy, thio-ether linkage;

The present invention relates to innhage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles

(e.g. macromolecules, polymers, dendrimers, proteins) to produce his protein and immunological constructs. The invention provides a method for linking an epitope (e.g. a peptide) to a carrier (e.g. a protein) do use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or minotopes of the cinvention describes peptides derived from or minotopes of the compositions of the livention are used to produce conjugated compounds. The compounds or compositions of the livention are useful in the manufacture of a medicament for the treatment of 19E medicated diseases. The invention are useful, in the manufacture of a protein so as to form an immunogenic conjugate which may be able to raise a protective entibody response in an animal or human patient. Animble 12-Animble 11 represent peptides derived from or minotopes of the Cepsilon2/Cepsilon3/Cepsilon4 region of human lgE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A linkage comprising an immunogenic conjugate useful treatment of lqE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The prosent invention describes an immunogen (1) comprising a peptide that and a carrier (1b) derived from protein D of Haemophilus influenzed or its fragment. Also described are: (1) a vaccine comprising (1), and an exciption; (2) protein D or its fragment; and (3) preparation of a vaccine of (1), comprising comprising a peptide or option of (1) with an exciptent, (1) has cytostatic, and alorgic, nootropie, neuroprotective and protozoacide activities.

It and the vaccine are useful for the manufacture of a medicament for preventing and treating infectious disease such as malaria or chronic disease such as cancer. Alzenora's disease such as malaria or chronic disease such as cancer. Alzenorate themselves of antipeptide immune responses while inducing a medicate humoral response against the carrier. The present sequence represents a specifically claimed minotope peptide sequence, which can be used in an immunogen of the
                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Epitope, mimotope, human, immunoglobulin E; igE; C-epsilon-2 domain,

                                                                                                                                                                                                                                                                     The present invention relates to compugates suitable for use in vaccines, where the compugate comprises a dissiphide hidde cyclises peptide and an armnogenic califier. The vaccines can be used in the treatment of a larger sections of a cyclise petide immunosen derived from human immunoglobulin B (198) suitable for use in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Intuncients and vaccine compilsing the intuncied west of the properting and the attentions diseases on maid the and object of the diseases cannot, compilses peptide and cannot from protein foot information

The present invention describes a peptide (1) comprising an isolated surface exposed group epitope (E1) of C-epsilon-2 domain (2) of immunosiobulin E (195), or its minispee Also described are (1) an immunosiobulin E (195), or its minispee Also described are (1) an immunosiopulin E (195), or its minispee (1) (2) a vaccine (1) or comprising allocation (2) (2) a vaccine (1) or comprising (1) (3) a ligand (10) capable of recognising BL) 44 a plarascentical composition (2) comprising (10), (2) a peptide (3) ordered of being recognised by producing (11), (1) or an end of an immunogen (11) by producing (11), (1) or an end of an in the manufacture of medicaments for treating as a vaccine and histamine release inhibitor. (1), (11) and (11) are useful in medicine and histamine release inhibitor. (1), (11) and (11) are useful in medicine and also in manufacture of medicaments for treating and ordering allocation (1), (11) and proventing also in diagnosities and in the affinity purification of circulating and preventide sequences which are used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ċ.

                                                                                                                                                                                                               The present invention relates to linkage methodology for the on the conjugation of compounds (e.g. peptides) to entitler withous to be a marked so proposed contact and a protein for use in a pharmaceution. The invention a contact with a protein for use in a pharmaceution of republic to a native with protein for use in a pharmaceution of republic to a native with a protein for use in a pharmaceution of republic to a native with a protein for use in a pharmaceution of protein for the invention of copyright of the invention of a produce computation of the invention of a manufacture of the invention allows for controlled conjugation of a peptide epitige (active of a medicament for the treatment of the medicated diseases. The invention allows for controlled conjugation of a peptide epitige (active in a low of the invention of a peptide epitide manufacture in a protective antibody response in an animal of homes patient.

Authorized Applicative antibody response in an animal of homes patient.

Authorized Applications and conjugation of a period for manufacture and protective antibody response in an animal of homes patient.
                                                                                                      351

The present invention relates to linkage methodology for use in the conjugation of compounds (e.g. populdes) to carrier vehicles

(e.g. macromolecules, polymers, dendrimers, proteins) to produce to biological compounds. The invention provides a method for linking an epirope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The protein for use in a pharmaceutical composition or a vaccine. The convention describes populdes derived form or minotopes of the compounds or compositions of the invention are useful in the manufacture of a medicament for the invention are useful in the manufacture of a medicament for the invention are useful in the manufacture of a medicament for the invention of appointed diseases. The invention allows for controlled conjugation of a peptide epitope (antigen) to a protective antibody response in an animal or human patient.

ANJIG622-ANJIG622 regressent peptides derived from or mimotopes of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a composition comprising allergy peptides are derived user large lates linked by an inert carrier. The allergy peptides are derived from Imminos/Obblin B 1990 or 19E receptor. The present peptide is one such peptide from 12 The composition is useful as a vaccine or for manufacturing an extrement for the prophylaxis or treatment of allergy. In partial are assing an anti-allergy infune response in an informational ouscillar to an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New vancine complishing allergy peptides linked by an inert carrier, useful for boosting an anti-allergy immune response in an individual susceptible to an allergic response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .
